S. MASON CARBAUGH
COMMISSIONER

RAYMOND D. VAUGHAN
DEPUTY COMMISSIONER

COMMONWEALTH of VIRGINIA

DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES

P. O. Box 1163, Richmond, Virginia 23209

With great pleasure I present this Virginia Agricultural Statistical Bulletin to all interested in the Commonwealth's agriculture.

This publication is a summary of data compiled by the Virginia Crop Reporting Service under a cooperative agreement between the Virginia Department of Agriculture and Consumer Services and the United States Department of Agriculture.

Less than normal but very timely rainfall throughout the 1981 growing season helped Virginia farmers produce record wheat, corn, soybean, peanut, and tobacco crops. However, bumper crops nationwide forced down most commodity prices and this combined with high farm production costs limited the recovery from the 1980 drought year.

The statistics in this annual summary present the facts necessary to analyze the achievements and problems faced by farmers in the State. Only through the availability of reliable data can accurate judgements and decisions be made by farmers and by those serving the farm sector.

I am grateful to the thousands of Virginians, both farm and agribusiness, for their voluntary cooperation in providing data to the Crop Reporting Service. I sincerely hope you will find this information to be helpful and interesting.

S. Mason Carbaugh
S. Mason Carbaugh
Commissioner

1981 FIELD CROP SUMMARY

The value of the 14 field crops (including potatoes and sweet potatoes) showed the effects of the excellent growing season by increasing 49 percent over the drought-reduced 1980 crop, to an estimated \$835 million in 1981, a new record. This compares with \$559 million in 1980. Tobacco continues to hold first place ranking based on value of production, \$264 million, 70 percent above the drought-ridden 1980 crop. The record high value was due to the record high prices received for all types and higher production. Corn for grain again held the second place ranking with nearly \$152 million, 33 percent above 1980. A large price drop (\$2.70 per bushel from \$3.48 per bushel) wasn't enough to offset the 72 percent increase in production. A 1 percent increase in all hay production, combined with a 10 percent increase in price, pushed the value of production up 11 percent to \$123 million, enough to keep it in the number three position. The strong demand for hay pushed the average price up to \$75.00 per ton, second only to the record of \$77.00 received in 1977, a drought year. The fourth ranked Virginia crop was once again soybeans with a value of almost \$103 million, 42 percent above 1980. The 87 percent increase in production was enough to maintain fourth place even with a decrease in season average price of \$1.79 to \$6.10 per bushel. Peanuts moved up to fifth place with a record production, 2.5 times greater than 1980, after suffering from two consecutive years of low production. The value of about \$93 million was up almost three-fold from a year earlier. The record high price of 28.1 cents per pound was another factor contributing to the tremendous increase in value. Wheat slipped back to the sixth spot in spite of the largest production since records began in 1866. The value, which at \$57.5 million was up 40 percent from 1980, also reflects the third highest price on record, \$3.35 per bushel, just 75 cents below the high set two years earlier. The remaining crops, ranked with respect to 1981 value of production and followed by percentage change from 1980 value, are listed as follows: (7) potatoes up 69 percent, thanks to a record high price of \$9.65 per cwt; (8) barley up 20 percent--a 16 cent decrease in price to \$2.10 per bushel could not offset a 29 percent increase in production; (9) sweet potatoes up 65 percent; (10) oats up 2 percent; (11) grain sorghum up 1 percent; (12) rye up 20 percent; (13) orchardgrass seed down 57 percent; and (14) cotton lint and seed up 5 percent.

Corn for grain: Virginia farmers harvested a record large crop of corn in 1981. Acreage harvested for grain increased from 595,000 in 1980 to 625,000 in 1981 primarily because the fields produced enough grain to make it worthwhile to combine them. The record high State yield of 90 bushels per acre was a result of timely rainfall and good farming practices. Final

production for 1981 corn was set at nearly 56.3 million bushels, 72 percent more than the drought-stricken 1980 crop.

Corn silage: Virginians harvested nearly 2.9 million tons of corn silage in 1981 from 190,000 acres. Yields averaged 15 tons per acre and were a welcome change from the light yield of 11.5 tons per acre averaged in 1980.

Soybeans: The 1981 soybean crop pushed the official production record to 16.8 million bushels. This total is 84 percent above the soybeans harvested in 1980. As a result of favorable weather on large late season plantings, yields averaged 26.5 bushels per acre.

Peanuts: After a disastrous year in 1980, Virginia growers rebounded to harvest a record crop of peanuts in 1981. Production was 330.8 million pounds, nearly 3 percent above the previous high harvested in 1973. Average yield of 3,150 pounds per acre is 20 pounds above the record yield also set in 1973.

Sorghum for grain: Grain was harvested from 11,000 acres in 1981. Yields were good and averaged 49 bushels per acre, only 2 bushels lower than the Virginia record of 51 bushels harvested in 1969. Production totaled 539,000 bushels, 39 percent more than 1980.

Sorghum silage: Silage was harvested from 10,000 acres of sorghum and milo in Virginia in 1981, up from 8,000 acres in 1980. Yields averaged 10 tons per acre, the same as 1980. Production of 100,000 tons was 20 percent above the 80,000 tons harvested the previous year.

Flue-cured tobacco: Growers harvested 120.2 million pounds of flue-cured tobacco in Virginia during 1981. Even though many left the bottom leaves in the field, the average yield of 2,185 pounds per acre is the highest recorded for Virginia growers.

Fire-cured tobacco: Fire-cured tobacco production increased 40 percent over 1980 and totaled 5.1 million pounds for 1981.

Burley tobacco: After 2 years of problems with disease and drought, the burley tobacco crop finally produced. Harvest in 1981 totaled 31.3 million pounds, the largest burley crop ever harvested in Virginia. Yields were excellent and averaged 2,350 pounds per acre. However, the yield record is 2,590 pounds per acre, set in 1969.

Maryland type 32 tobacco: Virginia growers only recently began planting this tobacco and in 1981 harvested 430 acres. The production on these 430 acres was 615,000 pounds.

Sun-cured tobacco: Harvested acres increased 31 percent to 510 acres in 1981. This specialty crop produced 673,000 pounds for Virginia growers in 1981.

All Hay: Production during 1981 totaled 1.6 million tons, 1 percent above 1980. Alfalfa hay accounted for 240,000 tons, up 10 percent from 1980. This year's crop was cut from 100,000 acres and yielded 2.4 tons per acre. Other hay production was 1.4 million tons, down 1 percent from a year earlier and was cut from 875,000 acres with a yield of 1.6 tons per acre.

Potatoes: Total production for 1981 is estimated at 2.3 million cwt., 51 percent above last year but 10 percent below 1979. These potatoes were dug from 16,000 acres, 2,000 more than in 1980 but 3,200 below 1979. Yield was 145 cwt., 35 cwt. higher than the 1980 crop. The Eastern Shore accounted for 93 percent of total production. Acreage, at 14,800, was up 15 percent from a year earlier but down 20 percent from 1979. The yield was 146 cwt., 36 and 11 cwt. above the previous two years respectively.

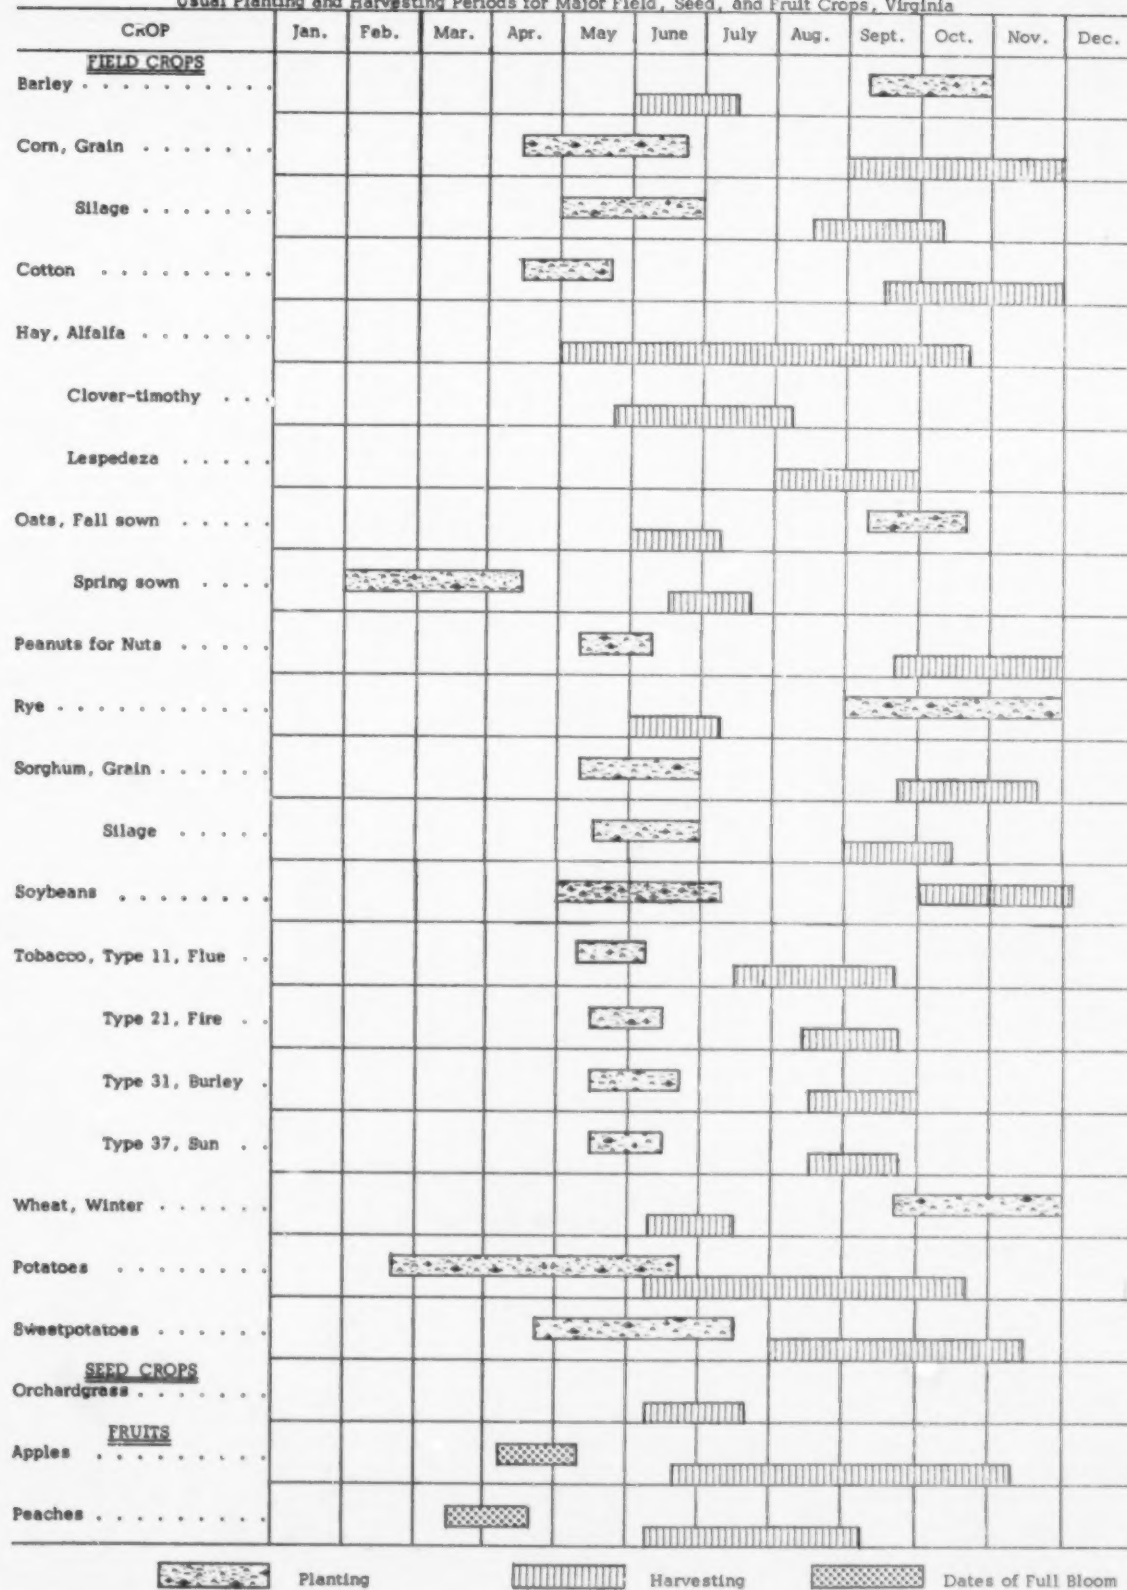

Sweet Potatoes: During 1981, 345,000 cwt. were dug, up 43 percent from a year earlier but down 32 percent from 1979. Acreage harvested was up 200 from 1980 to total 2,300, but down 1,600 from 1979. The yield of 150 cwt. is tied with the record high set in 1975 and is 35 cwt. higher than 1980 and 20 above 1979. The Eastern Shore accounted for 92 percent of the State's production (317,000 cwt.) from 2,100 acres and yielded 151 cwt. per acre.

Weather conditions during 1981 were very similar to 1980 in that both were drought years. The difference was in the timeliness of the rainfall during the 1981 growing season. The timely rains aided crop growth and development without drawing on the very low subsoil moisture levels. The result was a record production year for many of Virginia's major crops. Topsoil moisture was light, though timely, but subsoil moisture was not replenished thus moisture reserves were very low during the year.

The drought conditions of 1980 continued into 1981 with a month and a half of below normal temperatures accompanied by very low rainfall. Spring-like weather began in mid-February with above normal temperatures and heavier than normal rainfall in the north, central and western areas. March was cool and dry with winter grains starting off in only fair condition but improving by month's end. Peaches bloomed, apples were approaching bloom, corn planting began and potato planting reached the halfway point. Seeding tobacco beds neared completion by early April when the weather changed to near normal conditions. This change favored small grain and

grass growth as barley began to head. Corn planting passed the halfway mark and soybean, cotton and peanut planting got underway. Tobacco plant beds were rated in excellent condition with transplanting just beginning. Peaches and apples bloomed and escaped frost damage in most areas. May and early June weather was at or very near normal. Seeding of corn, beans and peanuts progressed quickly and tobacco transplanting was ahead of schedule. However, several late June frosts lowered prospects for the apple and peach crops. Hay and pasture conditions were good but growth was slow. The last half of June was dry and warm, ideal for hay curing and small grain combining which was well underway but topsoil moisture ratings deteriorated. Two heavy rains in July helped relieve some of the low soil moisture conditions but cut hay was damaged and potato digging was delayed. Double-crop soybeans suffered from the dryness more than full season beans which were blooming and setting pods. Peanuts bloomed, pegged and set pods while the flue, sun and fire-cured tobacco harvests began. Peach harvest was well underway in July. The weather during the first half of August was near normal with the last half warm and dry. Tobacco was harvested under favorable conditions in early August although burley started slowly, gaining momentum by month's end. Tropical Storm Dennis poured heavy rains on the southeast and coastal areas relieving much of the stress in peanuts and beans. However, pastures and corn silage were drying out by month's end. Again, moisture was normal the first half but below normal the last half of September. Temperatures were about average until the last week when averages were about 6 degrees below normal. Most corn was mature with silage harvest winding down and the grain corn harvest underway. Tobacco harvest was nearly complete but soybean and peanut harvesting got underway. Apple and sweet potato harvesting approached midpoint. Small grain planting was active. The first three weeks of October were favorable for crop harvests, precipitation was light and widely scattered with below normal temperatures. Topsoil moisture was mostly short but improved as rain fell during the final week. Most small grains were planted ahead of normal. The first freeze occurred on October 23. November rainfall and temperatures were below average enabling late harvesting and small grain planting to proceed ahead of normal. Flue-cured markets closed as burley and fire-cured markets opened. Precipitation fell regularly during December. Topsoil moisture was rated mostly short at mid-month but improved to mostly adequate by month's end. Temperatures were generally below normal. Pastures rated fair to good and winter grains and grazing conditions were rated good to excellent. Burley, fire and sun-cured tobacco marketing was active before the Christmas break.

SOURCE: Summary Report of Agricultural Liming Materials Sold in Virginia--January 1, 1981 through December 31, 1981, released by Fertilizer, Lime Regulatory Section, Virginia Department of Agriculture and Consumer Services.

1981 LIVESTOCK SUMMARY

ALL LIVESTOCK: Virginia farmers received \$321.7 million for marketing cattle, calves, hogs, sheep, and lambs in 1981, down 23 percent from 1980 when the record high of \$418.1 million was established. The live weight price farmers received for each species was lower in 1981 for cattle and sheep but higher for hogs. The value of Virginia's livestock inventory on January 1, 1982 declined 11 percent from a year earlier to \$784.2 million.

CATTLE: Virginia cattlemen had 1.85 million cattle and calves on farms on January 1, 1982, up 6 percent from the previous year. All cows (including heifers that have calved) accounted for 840,000 head, up 4 percent. Beef cows numbered 670,000 head, 80 percent of all cows. Dairy cow numbers declined 1 percent to 170,000 head. The 1981 calf crop was down 6 percent, but the number of cattle and calves on feed January 1 was 59 percent above a year earlier.

Virginia's ranking slipped to 26th in inventory of cattle and calves in 1981. Texas retained the number one spot with 12 percent of the nation's cattle. The number of farms in Virginia with cattle (beef or dairy) remained unchanged at 39,000 while farms with at least one milk cow declined to 8,000.

The total value of cattle and calves on Virginia farms on January 1 was nearly \$731 million, 10 percent below the previous January 1. The average value per head decreased \$70 to \$395. Marketings were down 23 percent and cash receipts from sales totaled \$215 million and were 30 percent below receipts in 1980.

HOGS: Virginia hog farmers held an inventory of 640,000 head as of December 1, 1981, down 15

percent from a year earlier. Breeding hogs accounted for 91,000 head, down 19 percent. The number of market hogs on hand was 14 percent lower than December 1, 1980. Virginia's pig crop for 1981 was nearly 1.1 million head, down 13 percent from a year earlier. The spring crop (December 1980 May 1981) was 562,000 pigs, 13 percent smaller than the previous year and the fall crop (June November 1981) of 497,000 weaned pigs was 15 percent below a year earlier. Farms with hogs declined to 21,000 during 1981.

The total value of all Virginia hogs and pigs as of December 1 was \$43.5 million, 19 percent below the record high set December 1, 1980. The average value per head, on hand December 1, was \$68.00, 5 percent below December 1, 1980. Marketings for 1981 were slightly below 1.1 million head, down 13 percent from 1980. Cash receipts from hogs sold totaled \$101.1 million, 1 percent below receipts in 1980.

SHEEP: Old Dominion sheepmen held 170,000 head of sheep and lambs on farm January 1, 1982, up 10,000 head from last year. Ewes one year old and older, at 127,000 head, were 4,000 head above last year.

There were 159,000 lambs saved in 1981, the same as 1980. Lambs saved per 100 ewes one year old and older on farms January 1, 1981 averaged 129.

Total value of all sheep and lambs on farms January 1, 1982 was \$9.9 million, 11 percent below 1981 and 1 percent below 1980. The average value per head, \$58.50, was \$11.00 below 1981. Cash receipts from marketings during 1981 were 16 percent lower than 1980 at \$5.6 million.

LIVESTOCK: Estimated Number, Value, and Number of Farms, by Classes, Virginia, 1977-82

1981 DAIRY SUMMARY

Milk cows in Virginia produced an average of 11,680 pounds of milk in 1981, the largest yearly average per cow on record. Production has been regularly increasing since 1933 when Virginia's cows averaged only 3,300 pounds. The highest average monthly production per cow was registered in May at 1,025 pounds. Production per cow was above last year for all months except February, May, June, and July. May and July were unchanged. Higher production per cow and increased cow numbers produced the highest State total in over 20 years of over 2 billion pounds, 2 percent above 1980. Besides having the highest production per cow, May also had the highest total production of any month, 176 million pounds. The average number of milk cows on farms during the year was 172,000 and ranged from 172,000 January-October, to 170,000 in December. November was at 171,000. Milk production came from 8,000 farms during the year, down 1,000 from 1980. Dairy farms made up 14 percent of all farms in the State during 1981.

Cash receipts from the marketings of milk and cream produced in Virginia were nearly \$280 million, 8 percent above 1980. Milk production is the leading single source of cash income making up 18 percent of all cash receipts in 1981. The milk-feed price ratio compares milk prices and feed costs. The ratio uses current prices and shows the pounds of 16 percent concentrate ration that could be purchased with a pound of milk. The higher the ratio, the more favorable the feed purchasing power of milk. The average ratio for 1981, at 1.43, was .02 above 1980. The ratio started at 1.35 in January then fluctuated from a low of 1.30 in May to a high of 1.59 in December.

Utilization of the 1981 production falls into three categories:

1. fluid grade, including milk sold directly to consumers which accounted for 92.5 percent of production.
2. manufacturing grade, which was 7 percent of the total, was used to make various dairy products, and

3. used on farms which was only .5 percent of all milk.

Deliveries of Grade A milk totaled 1.8 billion pounds, 2 percent above 1980, and deliveries of manufacturing grade totaled 142 million pounds, up 3 million pounds or 2 percent. Prices received by producers in 1981 were again record highs of \$14.20 per cwt. for Grade A and \$12.40 per cwt. for manufacturing grade milk. Converting the Grade A price to gallons, the dairy farmer received \$1.22 a gallon.

Curd and creamed cottage cheese production increased from 1980. Curd production rose for the fourth consecutive year to 8.2 million pounds, 12 percent above 1980. Curd is primarily used in the production of creamed and low-fat cottage cheese. Creamed cottage cheese rose for the fifth consecutive year to a production of 11.5 million pounds, more than 21 percent above 1980.

Ice cream production increased to 10.7 million gallons, over 21 percent above 1980. This production was composed of 97 percent hard serve and 3 percent soft serve. Virginia processors made 5.5 million gallons of mix, an increase of 10 percent from 1980.

Ice milk production, which includes hard and soft serve and freezer-made milk shake, totaled 4.2 million gallons in 1981, a 6 percent increase. Mix production, at 6.1 million gallons, was 4 percent above 1980. This production was composed of 13 percent hard serve and 87 percent soft serve.

Milk sherbet production for 1981 was 400,000 gallons and mix was 246,000 gallons compared to 468,000 gallons of final product and 297,000 gallons of mix in 1980.

Total cheese production in 1981, excluding cottage cheese, amounted to 7.5 million pounds, 8 percent above 1980's 6.9 million pounds. American cheese accounted for more than 76 percent and Italian cheese accounted for almost 13 percent of all cheese made.

1981 POULTRY AND HONEY SUMMARY

POULTRY: Gross income in Virginia from the production of poultry in the marketing year ended December 1, 1981 totaled \$289.7 million compared with \$262.4 million in 1980. Of the 1981 gross income 54 percent came from broilers, 23 percent from turkeys, 22 percent from eggs, and 1 percent from other chickens.

Live weight production of broiler meat in 1981 totaled 562 million pounds, 6 percent above 1980. Egg production in 1981 totaled 947 million eggs, up 4 percent from 1980. Turkeys raised in 1981 totaled 10.0 million, 1 percent below 1980.

Chickens (excluding broilers) produced in 1981 numbered 3.2 million, down 6 percent from 1980.

Hatcheries (broiler chicks include a West Virginia hatchery) produced 164.9 million broiler chicks and 6.3 million egg-type chicks during 1981. Turkey poults hatched during 1981 numbered 6.1 million heavy breeds and 2.5 million light breeds.

HONEY: Virginia's 73,000 bee colonies produced nearly 2.3 million pounds of honey in 1981. Yield per colony averaged 31 pounds. The average price per pound received by producers was 95.0 cents.

1981 VEGETABLE SUMMARY

The value of commercial vegetables produced in 1981 was sharply above the previous year. In 1981, receipts totaled \$33.0 million compared with \$23.4 million in 1980. Fresh market vegetables showed a large increase in the value of production over the previous year's level while the value of processing vegetables declined. The total value of fresh market vegetables rose from 19.9 million in 1980 to 29.8 million in 1981, an increase of 50 percent. Processing vegetables declined to \$3.2 million in 1981 from \$3.5 million in 1980, a decrease of 9 percent. Fresh market vegetables accounted for 90 percent of the total value of Virginia's major vegetables while the processing segment accounted for the remaining 10 percent.

Tomatoes were first in the 1981 ranking by value of production for individual vegetables. Tomato production was valued at \$15.4 million. Production increased for both fresh market and processing tomatoes from the previous year while average prices for both uses were also above 1980. Fresh market tomatoes, which accounted for 90 percent of the total value of tomatoes, increased in value from \$5.4 million in 1980 to \$13.9 million in 1981. Processing tomatoes increased in value from \$1.3 million in 1980 to \$1.5 million in 1981.

Cucumbers remained second in value of production among Virginia vegetables, showing an increase in value from \$5.0 million in 1980 to \$7.2 million in 1981. This increase in total value of cucumbers resulted from increases in yield and average price for the fresh market segment. Total value of fresh market cucumbers was 73 percent above 1980 but pickles declined 33 percent in total value. Value of production for snap beans, which was in third place behind tomatoes and cucumbers, totaled \$3.3 million, a decrease in value from \$3.6 million in 1980.

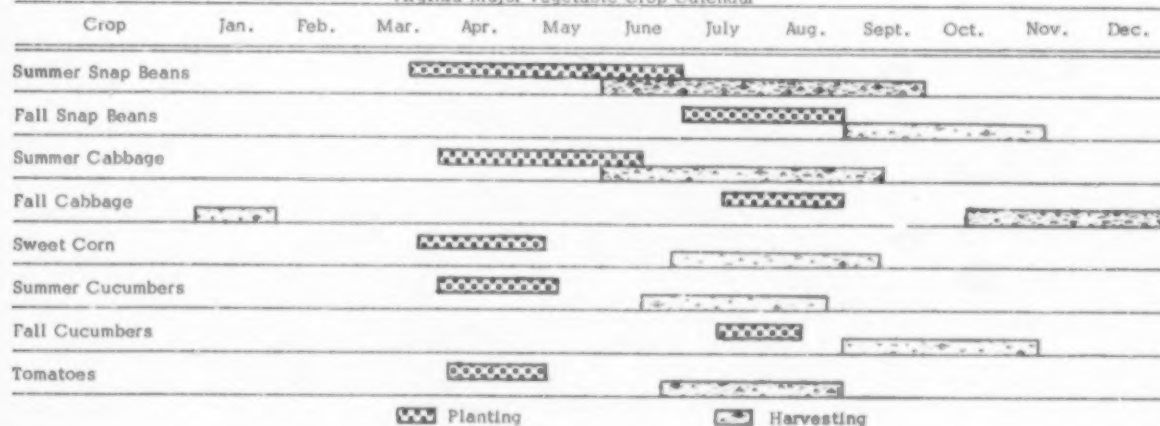

Harvested acreage for commercial vegetables in 1981 totaled 22,430 acres, down 11 percent from the 1980 figure of 25,070 acres. Cabbage showed an increase in harvested acreage from 1980. Sweet corn was unchanged but harvested acreage declined for all other crops in the fresh market segment. In the processing segment harvested acreage declined for all crops.

Production for both fresh market and processing vegetables in 1981 totaled 2.4 million hundredweight, up 25 percent from 1980. Total production in 1981 was up 45 percent for the fresh market segment while production for the processing segment was down 12 percent.

1/ Crops harvested mainly July through December but includes earlier harvest. 2/ The following crops, mostly for processing, were grouped to prevent disclosure of individual operations: asparagus, green peas, sweet corn, spinach and cabbage for kraut.

1981 FRUIT SUMMARY

The 1981 apple crop was 11 percent larger than in 1980 while peach production in 1981 was 6 percent below the crop of 1980.

Apple production in commercial orchards in 1981 totaled 465 million pounds (11,071,000 forty-two pound equivalents). Value of utilized production

was \$48.3 million, 47 percent above 1980. Virginia ranked fifth in the U.S. in apple production in 1981.

Peach production in 1981 totaled 30 million pounds (625,000 forty-eight pound equivalents). Total value of the 1981 crop, at 4 million, compares with the value of \$5 million in 1980.

FARM INCOME AND PRODUCTION EXPENSES

Virginia's farm income situation was mixed in 1981 with record large receipts offset by the highest production expenses ever. Farmers received more than \$1.6 billion for their farm products in 1981, a record high and 11 percent more than the nearly \$1.5 billion received during drought-plagued 1980. Receipts were higher for all groups of commodities except meat animals and fruits.

Cash receipts from livestock and livestock products totaled \$.9 billion, down 5 percent from a year earlier. Meat animals, primarily cattle and calves, accounted for most of the decline as decreased marketings and lower prices combined to reduce cash receipts by 23 percent from 1980. Lower receipts were also recorded for hogs, sheep and lambs and turkeys.

Partially offsetting the reduced receipts for meat animals and turkeys were increased marketings and higher prices for wholesale milk (up 8 percent), broilers (plus 14 percent) and eggs (up 17 percent). Sales of livestock and livestock products accounted for 55.4 percent of total cash receipts in 1981 compared with 65 percent in 1980. For comparative purposes, the 1976-80 average is 58.2 percent.

Cash receipts from crops in 1981 totaled more than \$.7 billion, 42 percent above the drought-reduced receipts for 1980. Marketings for all crops were larger in 1981 and in many cases more than offset lower prices.

Despite lower prices, cash receipts for corn were up 60 percent, wheat up 74 percent, and soybeans 19 percent higher. Higher prices, combined with the larger marketings, increased receipts for tobacco (53 percent), peanuts (183 percent) and potatoes (51 percent).

Ranking the commodities, milk and cream regained the top spot it has held every year except one since 1973. The 1981 total of \$282

million was 8 percent higher than 1980 and accounted for 17 percent of total cash receipts from farm marketing. Tobacco, at nearly \$243 million accounted for almost 15 percent of the total; cattle and calves at \$215 million (13 percent of the total); broilers \$157 million (nearly 10 percent of the total); hogs \$101 million (6 percent of the total); soybeans \$85.4 million (5 percent of the total); Peanuts \$83.8 million (5 percent of the total); turkeys \$66.6 million (4 percent of the total); corn \$65.0 million (4 percent of the total); eggs \$62.3 million (4 percent of the total); wheat \$56.3 million (3 percent of the total); and potatoes \$19.1 million (1 percent of the total). For more details, see table on page 2.

Gross income from farming set a new record high, at nearly \$2.0 billion, 12 percent higher than the previous record set in 1980. The average gross income per farm was \$33,300, down slightly from 1980. Total net income per farm after inventory adjustment was \$264 million, more than 2-1/2 times that realized in 1980 but 25 percent less than the record high established in 1978. On a per farm basis, net income averaged \$4,481, well above the \$1,786 average of 1980, but well below the 1978 record of \$5,993. The ratio of net income per farm to gross income per farm was 13.5 percent, comparable to the 1976-80 average of 14 percent.

PRODUCTION EXPENSES SET A RECORD:

Farm production expenses amounted to more than \$1.8 billion in 1981, the highest of record. The 1981 expenses represent a 14 percent gain over 1980, and are up 27 percent from 1979. All major operating expenses were higher in 1981 with the exception of feed.

Farm production expenses continued a recent trend by exceeding cash receipts for the fourth time in the last five years. The ratio of production expenses to gross farm income was 92.6 percent, the highest of record. The average for 1971-1980 is 80.7 percent.

1981 AGRICULTURAL LABOR

Estimates of Agricultural Labor are based on multiple frame enumerative probability surveys. Two sampling frames are utilized -- a list frame and an area frame. In combination they complement each other for sample efficiency. The list frame is assembled from various sources and consists of employers of agricultural labor. A random stratified sample is selected from this list for each of the surveys. Employers expected to have large numbers of workers are sampled more heavily than those with fewer workers. The area sampling frame is an exhaustive listing of small partitioned units of land which can be sampled. This frame is used primarily to estimate for the incompleteness of the list. The same survey method is used extensively by the Virginia Crop Reporting Service in a variety of estimating programs. It has proven to be a most efficient method of compiling reliable agricultural statistics.

Formerly, Agricultural Labor Surveys were conducted in the U.S. and Virginia on a quarterly basis. However, budget constraints require that the Department of Labor, sponsor of this survey, reduce their data needs. For this reason, quarterly surveys were discontinued after the April 1981 survey. Henceforth, labor surveys will be conducted on an annual basis beginning with the July 1982 survey.

The agricultural labor tables show estimates of farm employment and wage rates by specified quarters based on the Agricultural Labor Survey. The data relate to the week containing the twelfth day of the specified quarterly or annual month. Hourly rates are shown for methods of pay and types of work performed so that data users will have comparative information.

1981 CUSTOM WORK RATES ON VIRGINIA FARMS
By James M. Moore, Extension Economist, Farm Management
Virginia Polytechnic Institute and State University

The purpose of this publication is to report the custom work rates on Virginia farms for the 1981 crop season.

The rates quoted were collected by a survey of farm operators and extension agents in Virginia during the winter of 1981-82. Each respondent to the survey was to quote rates only for those operations with which he was familiar. Thus, some respondents quoted rates only for one or two operations while others quoted rates for many operations. Exchange work between farmers was not to be considered by respondents as custom work.

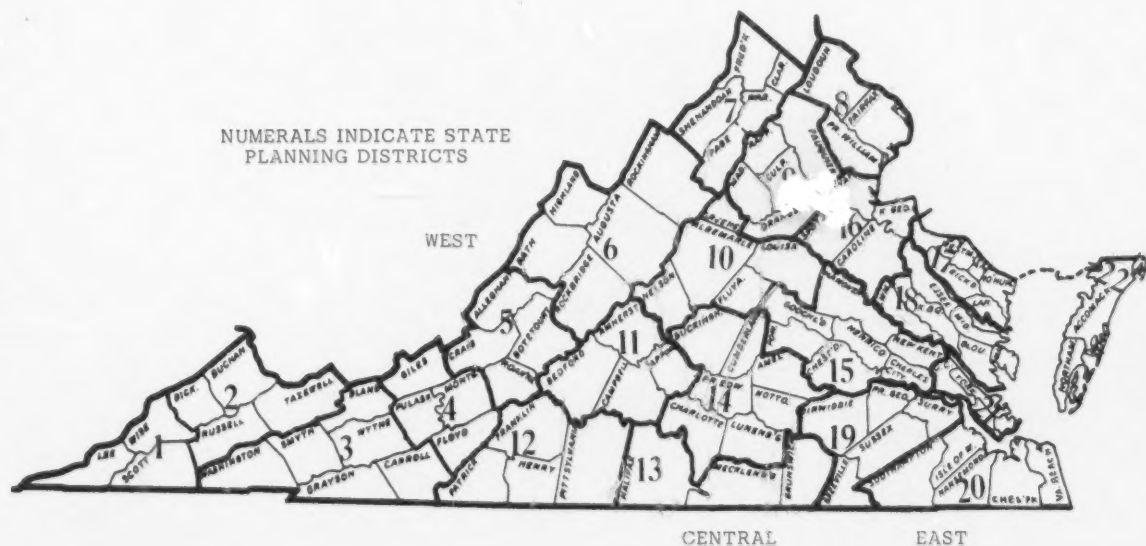

The responses to the survey were edited to remove those replies for which the respondent's interpretation was obviously in error.

Custom work rates are defined to include the cost of hiring a machine, its fuel, an operation, and any other inputs directly associated with the machine. The custom work rates do not include the cost of seed, fertilizer, and other material unless otherwise specified. Application of lime and land plaster are the only two custom operations for which the cost of the material is included in the rates quoted.

INTERPRETATION OF THE CUSTOM RATE TABLES: The quoted custom work rates should provide the user with some insight into the charges made during 1981 for a given operation in a given area of Virginia; however, the rates must be interpreted with care for the following reasons. Due to the cost of personal surveys, questionable or doubtful responses could not be verified. In many cases, the number of responses to a particular custom work rate was insufficient to provide a basis for statistical tests of significant differences between these rates. In addition, input costs and price changes may well alter the prevailing custom work rates for 1982 and subsequent years.

Custom work rates will vary by areas of the State. These differences are caused by variations in field size, soil characteristics, steepness of slopes, and availability of machines. For each rate quoted, the number of observations is shown as well as the average, lowest, and highest rate.

Custom work rates are quoted for different operations by areas of Virginia. The "West" area includes State Planning Districts 1 through 7. The "Central" area includes Planning Districts 8 through 14 and District 16. Planning Districts 15 and 17 through 22 make up the "East" area.

CONSUMER PRICE INDEX: Commodity Groups and Selected Items, United States, 1930-1981

NOTE: 1967=100. Prior to 1965, excludes Alaska and Hawaii. Beginning 1965, index structure revised to reflect buying patterns of urban wage earners and clerical workers in the 1960's, including single workers living alone as well as families of two or more persons; indices for prior years apply only to families of two or more persons. See HISTORICAL STATISTICS, COLONIAL TIMES TO 1957, Series E 113-139, for indices on 1947-1949 base. Beginning in 1978, index revised to reflect buying patterns of all urban consumers. Changes in definitions for some items may cause incomparability of indices for 1978 and later years with prior indices listed.

These crops are included as assets.

COLLECTING INFORMATION FOR AGRICULTURAL STATISTICS

The Virginia Crop Reporting Service serves farmers and the agricultural industry by preparing estimates of crops, livestock, poultry, dairy, agricultural labor, prices and other agricultural related topics. "Virginia Agricultural Statistics" presents an accumulation of these estimates as well as agricultural information from other sources.

The major sources of the data which are used for the crops and livestock estimates are farmers, county agents, hatcherymen, managers of slaughterhouses and grain elevators, seed and feed dealers, buyers, shellers, processors, gins, merchants, machinery dealers and others--the same people who are extensive users of the information. Data are collected by any of several methods; personal interviews, mail inquiries, telephone interviews, and/or field observations.

Mail surveys are widely used for collecting information on an array of agricultural activities; planting and harvesting intentions, planted and harvested acreage, yields and production, livestock and poultry inventories, breeding intentions, prices paid and received, and many others. The mail survey as the exclusive data collection technique was particularly suited to the time when there were more than twice as many farms as now with most of the farms being similar. The mail survey continues to be an important method of gathering information. The low cost of data collection by mail is one of its principal advantages. Many reporters have participated in mail surveys throughout their entire careers in agriculture, and some families have been reporting through more than one generation.

In the early 1950's, Statistical Reporting Service (SRS), set up a research staff to develop and improve statistical techniques. A long range program recommended probability sampling for enumerative surveys and objective measurements of crop yields. The program was initiated on a pilot basis in 10 states in 1954 and gradually expanded to fully operational in the 48 contiguous states in 1967.

Statistical theory provides a basis for selecting samples so that the chance, or probability, of each farm or farmer being in the sample can be computed. This offers two definite advantages:

1. Probability sampling provides information for computing sampling errors. Thus, estimates can be made with a known degree of precision.

2. Since the probability sample represents a true cross section of U.S. farms, the estimates are not biased as they may be when the sample is not representative.

These methods are supplemented by the mail survey. The combined data are used for estimating crop acreages and production, yields, and livestock inventories.

JUNE ENUMERATIVE SURVEY: Each year during the last week of May and the first week of June, a group of trained enumerators representing the Crop Reporting Service visit a set of selected land areas or segments which are scattered throughout Virginia. Initially all the land in the State was stratified or broken into categories based on its use. The four broad areas were:

1. Intensively cultivated areas.
2. Extensive agricultural areas used primarily for livestock.
3. Highly developed land such as cities and industrial areas.
4. Nonagricultural land such as parks and forests.

After the stratification, land areas representative of the State were randomly drawn off to be used as segments. There are now 343 segments in Virginia, averaging about 400 acres each. The segment areas are delineated on aerial photographs, and each person who operates land in any segment is interviewed to determine the land's use. Although the chief interest is in the crops grown and livestock kept on the land, all uses of the land in a segment are accounted for. Expansions of the collected data give indications of the crop and livestock totals in Virginia. These indications are used in conjunction with indications from mail surveys which are conducted at the same time. Using both types of indicators results in improved accuracy in the various estimates. Approximately 20 percent of the segments are replaced each year by new segments so as to reduce respondent burden.

DECEMBER ENUMERATIVE SURVEY: Around December 1, about 400 farms, which were contacted in June, are visited again to provide data on livestock numbers and acres sown to winter wheat and rye. As in the previous surveys, mail survey indications are combined with expanded data from the December survey, resulting in a basis for our estimates of the December 1 hog and pig inventory, the fall pig crop, intentions for spring farrowings, year-end inventories of cattle and chickens, and winter wheat and rye plantings.

LARGE LIVESTOCK OPERATORS: A change in inventories of one, or a very few, large livestock operations can have a tremendous effect on total numbers of a specie in Virginia. Therefore, a list of farms with a minimum of at least one of the following is maintained: 75 cattle of any type, 75 hogs, and/or 400 chickens. A survey method called multiple-frame sampling is used to make most livestock estimates. This method involves the supplementing of the enumerated area segments (area frame) with a random sample of a list (list frame) of large operators (surveyed by mail or telephone). This combined survey method

results in greater accuracy of livestock numbers at a lower cost.

COOPERATION: All surveys depend heavily on the cooperation of those contacted, and this is especially true in the multiple-frame survey method mentioned above. Better participation in answering questionnaires about crop acreages and production, livestock numbers, and other farm related items, results in more accurate data upon which to base estimates. The Virginia Crop Reporting Service sincerely thanks all who have participated in the various agricultural surveys.

VIRGINIA: APPROXIMATE LOCATIONS OF LAND AREA SEGMENTS ENUMERATED IN JUNE 1982

1983 CROP REPORTING BOARD RELEASE DATES

JANUARY:

- 3 - Dry Milk and Whey Products
- 4 - Celery; Poultry Slaughter
- 7 - Vegetables
- 10 - Turkeys
- 11 - Crop Production
- 12 - Non-Citrus Fruits and Nuts--Annual
- 13 - Crop Production--Annual; Potato Stocks
- 17 - Milk Production
- 18 - Cattle on Feed
- 20 - Cold Storage
- 21 - Grain Stocks; Rice Stocks
- 24 - Livestock Slaughter; Eggs, Chickens and Turkeys
- 25 - Crop Values
- 26 - Sheep and Goats
- 28 - Cattle; Layers and Egg Production--Annual
- 31 - Egg Products; Agricultural Prices

MARCH:

- 3 - Egg Products; Poultry Slaughter
- 4 - Celery; Vegetables; Dry Milk and Whey Products
- 10 - Crop Production
- 11 - Peanut Stocks & Processing
- 14 - Potato Stocks; Cattle on Feed; Hatchery Production--Annual
- 15 - Livestock Slaughter--Annual
- 17 - Hop Stocks
- 21 - Hogs and Pigs
- 22 - Vegetables; Cold Storage--Annual
- 23 - Eggs, Chickens, and Turkeys
- 25 - Wool and Mohair
- 31 - Egg Products; Agricultural Prices

MAY:

- 2 - Egg Products
- 3 - Poultry Slaughter
- 5 - Celery
- 6 - Vegetables; Dairy Products; Dairy Products--Annual; Dry Milk and Whey Products
- 10 - Crop Production
- 13 - Potato Stocks; Cattle on Feed
- 16 - Sugar Market Statistics
- 18 - Eggs, Chickens, and Turkeys
- 25 - Milk--Prod., Disposition and Income
- 31 - Egg Products; Agricultural Prices

FEBRUARY:

- 4 - Celery; Dairy Products; Dry Milk and Whey Products
- 10 - Crop Production
- 14 - Potato Stocks; Cattle on Feed
- 15 - Sugar Market Statistics
- 17 - Prospective Plantings
- 18 - Eggs, Chickens, and Turkeys
- 28 - Agricultural Prices

APRIL:

- 1 - Meat Animals--Production, Disposition and Income; Poultry Slaughter; Dry Milk and Whey Products
- 5 - Celery
- 8 - Vegetables; Poultry--Production, Disposition and Income
- 11 - Crop Production
- 14 - Potato Stocks
- 15 - Milk Production
- 18 - Cattle on Feed
- 19 - Eggs, Chickens, and Turkeys
- 21 - Grain Stocks; Rice Stocks
- 22 - Livestock Slaughter; Cold Storage
- 29 - Agricultural Prices

JUNE:

- 1 - Poultry Slaughter
- 2 - Minn.-Wisc. Mfg. Milk Final--1981/82
- 3 - Dry Milk and Whey Products
- 6 - Celery; Vegetables--Annual
- 7 - Vegetables
- 10 - Crop Production
- 15 - Cattle on Feed
- 21 - Vegetables
- 22 - Grain Stocks; Hogs and Pigs; Cherries--June 15
- 23 - Eggs, Chickens, and Turkeys
- 24 - Farm Prod. Expenditures--Summary Report
- 29 - Acreage
- 30 - Ag Prices--Monthly; Ag Prices--Annual

1983 CROP REPORTING BOARD RELEASE DATES (Continued)

JULY:

- 1 - Egg Products; Poultry Slaughter; Dry Milk and Whey Products
- 5 - Non-Citrus Fruits and Nuts--Midyear Supplement
- 6 - Celery
- 12 - Crop Production
- 14 - Vegetables
- 18 - Cattle on Feed; Milk Production
- 19 - Eggs, Chickens, and Turkeys
- 20 - Farm Production Expenditures--1982
- 21 - Cattle; Cold Storage
- 22 - Livestock Slaughter
- 29 - Agricultural Prices

SEPTEMBER:

- 7 - Celery
- 9 - Vegetables
- 12 - Crop Production
- 13 - Peanut Stocks and Processing
- 14 - Cattle on Feed
- 16 - Hop Stocks
- 20 - Soybean Stocks; Hogs and Pigs
- 22 - Eggs, Chickens, and Turkeys
- 23 - Citrus Fruits
- 28 - Potatoes and Sweet Potatoes
- 30 - Egg Products; Agricultural Prices

NOVEMBER:

- 4 - Celery; Dairy Products
- 10 - Crop Production
- 16 - Cattle on Feed
- 21 - Eggs, Chickens, and Turkeys
- 29 - Commercial Fertilizers--Consumption
- 30 - Agricultural Prices

AUGUST:

- 1 - Egg Products
- 2 - Poultry Slaughter
- 4 - Dairy Products; Dry Milk and Whey Products
- 5 - Celery; Vegetables
- 11 - Crop Production
- 12 - Mushrooms
- 15 - Cattle on Feed
- 16 - Cranberries
- 19 - Rice Stocks; Eggs, Chickens, and Turkeys
- 23 - Farm Labor
- 31 - Egg Products; Agricultural Prices

OCTOBER:

- 3 - Poultry Slaughter
- 4 - Cherry Utilization
- 5 - Celery
- 7 - Vegetables
- 11 - Crop Production
- 14 - Milk Production
- 18 - Cattle on Feed
- 20 - Cold Storage; Eggs, Chickens, and Turkeys
- 21 - Livestock Slaughter
- 24 - Grain Stocks; Rice Stocks
- 31 - Egg Products; Agricultural Prices

DECEMBER:

- 2 - Egg Products; Poultry Slaughter
- 6 - Celery
- 12 - Crop Production
- 14 - Potato Stocks; Cattle on Feed
- 21 - Eggs, Chickens, and Turkeys
- 22 - Small Grains; Hogs and Pigs
- 27 - Vegetables--Preliminary
- 30 - Egg Products; Agricultural Prices

VIRGINIA CROP REPORTING SERVICE
PUBLICATION ORDER FORM

CHECK APPROPRIATE BOX:

ANNUAL SUBSCRIPTION FEE	
Domestic	Foreign
\$10.00	\$12.50

☐ 912 CROPS AND LIVESTOCK: Released twice monthly on about the 10th and 24th except for February and March when there will be only one release each month on about the 20th. Content and month of issue follow:

CROPS

Crop Acreage	Feb., July
Crop Production (except Feb. & Mar.)	Monthly
Grain Stocks (Quarterly)	Jan., Apr., June, Oct.
Annual Summary	Jan.
County Estimates--Major Crops	Mar.-Aug.
Peanut Varieties and Cropping Practices	Aug.
Soybean Varieties and Cropping Practices	Aug.
Flue-Cured Tobacco Varieties	May
Tobacco Sales by Type and Market	Nov.-Apr.

LIVESTOCK

Cattle Inventory and Calf Crop	Jan., July
Cattle on Feed	Monthly
Hog & Pig Inventory & Pig Crop	June, Dec.
Meat Animals, Prod., Disp. & Income	April
Livestock Slaughter (Quarterly)	Jan., Apr., July, Oct.
County Estimates (Cattle, Milk Cows, Hogs & Sheep)	April-May

POULTRY

Eggs, Chickens, Turkeys (Quarterly)	Mar., June, Sept., Dec.
Poultry Production, Disp. & Income	April
Hatchery Production	Monthly

MILK AND DAIRY

Milk Production (Quarterly)	Jan., Apr., July, Oct.
Milk Production, Disp. & Income	May

PRICES AND INCOME

Agricultural Prices	Monthly
Crop Values	Feb.
Farm Income	Sept.
Farm Real Estate	Sept.

☐ 911 WEATHER-CROP Weekly: Apr.-Nov. \$12.00 \$15.00

☐ 611 BROILER Weekly \$15.00 \$18.75

☐ STATISTICAL BULLETINS: Write for bulletins currently available and the charge. Varies

☐ 921 VIRGINIA AGRICULTURAL STATISTICS: (Includes major statistical series of Virginia agriculture for current and recent years) Sept. No Charge No Charge

☐ 121 TOBACCO SALES - by Types and Market. Monthly during season. No Charge No Charge

TO SUBSCRIBE TO VIRGINIA CROP REPORTING SERVICE PUBLICATIONS, CHECK THE REPORTS LISTED ABOVE AND FILL OUT THE REVERSE SIDE OF THIS FORM. BE SURE TO MAIL THE ENTIRE FORM.

HOW TO ORDER

Check the report series listed on the reverse side, add up the subscription fees, and enter the total cost in the space provided below. Make check or money order payable to USDA/SRS. Send this entire order to:

Crop Reporting Board Publications
Room 5829-South Building
U.S. Department of Agriculture
Washington, D.C. 20250
